## Untitled continuation (E0029)

*Continues an entry from an earlier page.*

Endless Engine.

## ENDLESS (E0030)

ENDLESS, something without an end : thus au- thors mention endless rolls, the endless frew, &c.

## ENDORSE (E0031)

ENDORSE, in heraldry, an ordinary, containing the eighth part of a pale, which Leigh fays is only used when a pale is between two of them.

## ENDORSED (E0032)

ENDORSED, in heraldry, is said of things borne back to back, more usually called addorsed.

## ENDOWMENT (E0033)

ENDOWMENT, in law, denotes the settling a dower on a woman : though sometimes it is used, figuratively, for settling a provision upon a parson, on the building of a church ; or the settling a sufficient portion of tithes for a vicar, when the benefice is appropriated.

## ENDYMION (E0034)

ENDYMION, the 12th king of Elis. Being expelled his kingdom, he retired into Caria to mount Latmos, where he studied the heavenly bodies, but chiefly the moon; which gave rise to the fable of the poets, that he was beloved by the moon, who visited him every night as he lay asleep upon the top of that hill.

## ENEMY (E0035)

ENEMY, in law, an alien or foreigner, who publicly invades the kingdom.

## ENERGUMENS (E0036)

ENERGUMENS, in church-history, persons supposed to be possessed by the devil, concerning whom there were many regulations among the primitive Christians. They were denied baptism, and the eucharist; at least, this was the practice of some churches: and though they were under the care of exorcists, yet it was thought a becoming act of charity, to let them have the public prayers of the church, at which they were permitted to be present. See Exorcism.

## ENERGY (E0037)

ENERGY, a term of Greek origin, signifying the power, virtue, or efficacy of a thing. It is also used, figuratively, to denote emphasis of speech.

## ENFANS PERDUS (E0038)

ENFANS PERDUS, the fame with forlorn-hope. FORLORN.

## ENFILADE (E0039)

ENFILADE, in the art of war, is used in speaking of trenches, or other places, which may be scoured by the enemy's shot along their whole length. In conducting the approaches at a siege, care must be taken that the trenches be not enfiladed from any work of the place. See TRENCHES.

## ENFRANCHISEMENT (E0040)

ENFRANCHISEMENT, in law, the incorporating a person into any society or body politic.

## ENGAS TRIMYTHI (E0041)

ENGAS TRIMYTHI, in Pagan theology, the Pythians, or priestesses of Apollo, who delivered oracles from within, without any action of the mouth or lips.

The ancient philosophers, &c. are divided upon the subject of the engastrimythi. Hippocrates mentions it as a disease. Others will have it a kind of divination. Others attribute it to the operation or possession of an evil spirit. And others to art and mechanism. M. Scottus maintains that the engastrimythi of the ancients were poets, who, when the priests could not speak, supplied the defect by explaining in verse what Apollo dictated in the cavity of the balon on the faceted tripod.

## ENGENDERING (E0042)

ENGENDERING, a term sometimes used for the act of producing or forming any thing: thus meteors are said to be engendered in the middle region of the atmosphere, and worms in the belly.

## ENGINE (E0043)

ENGINE, in mechanics, is a compound machine, made of one or more mechanical powers, as levers, pullies, screws, &c. in order to raise, cast, or sustain any weight, or produce any effect which could not be easily effected otherwise. The word is formed of the

French engine, from the Latin ingenium wit; by reason of the ingenuity required in the contrivance of engines to augment the effect of moving powers.

ENGINE for extinguishing Fires. See HYDROSTATICS, nř 33.

Pile-Engine, one contrived for driving piles. See Pile-Engine.

## STEAM-ENGINE (E0044)

STEAM-ENGINE, a machine to raise water by fire, or rather by the force of water turned into steam. See STEAM Engine.

ENGINE for dividing Mathematical Instruments. See Ramsden's Engine.

## ENGINEER (E0045)

ENGINEER, in the military art, an able expert man, who, by a perfect knowledge in mathematics, delineates upon paper, or marks upon the ground, all forts of forts, and other works proper for offence and defence. He should understand the art of fortification, so as to be able, not only to discover the defects of a place, but to find a remedy proper for them; as also how to make an attack upon, as well as to defend, the place. Engineers are extremely necessary for these purposes: wherefore it is requisite, that, besides being ingenious, they should be brave in proportion. When at a siege the engineers have narrowly surveyed the place, they are to make their report to the general, by acquainting him which part they judge the weakest, and where approaches may be made with most success. Their business is also to delineate the lines of circumvallation and contravallation, taking all the advantages of the ground; to mark out the trenches, places of arms, batteries, and lodgments, taking care that none of their works be flanked or discovered from the place. After making a faithful report to the general of what is doing, the engineers are to demand a sufficient number of workmen and utensils, and whatever else is necessary.

## ENGLAND (E0046)

ENGLAND, the southern division of the island of Great Britain. Including Wales, it is of a triangular form, and lies between the 50th and 55th degrees of north latitude, extending about 400 miles in length from south to north, and in some places it is 300 miles in breadth. It is bounded by Scotland on the north; by the English Channel on the south, dividing it from France; by the German Sea on the east; and on the west by St George's, or the Irish, Channel.

At what time the inland of Britain was peopled is uncertain; nor do we know whether the southern or northern parts were first inhabited. We have no accounts that can be depended upon before the arrival of Julius Caesar, and it is certain he found the southern parts full of people of a very warlike disposition. These people, according to Caesar, were a colony of the Gauls; and this opinion is embraced by most of the ancient as well as modern writers. It is chiefly founded on the agreement observed by the Romans between the two nations in their customs, manners, language, religion, government, way of fighting, &c. The more northern inhabitants, according to Tacitus, came from Germany. This he infers from the make of their limbs; but Caesar calls them Aborigines.

England, including the principality of Wales, when first invaded by the Romans, was divided into 17 petty states. 1. The Damnonii, called also Dumnonii and Domnonii, inhabiting the counties of Cornwall and Devonshire. 2. The Durotriges, who inhabited the tract now called Dorsetshire. 3. The Belgæ peopled
